linkedin.com/in/rauh-abdillah-5ab331326

Computer Science student at BINUS University Malang who builds full-stack web apps and small desktop tools. I have worked on eight projects in JavaScript/TypeScript, Go, Java, and Python, including an online furniture store with role-based access, Midtrans payments, and a Gemini-powered sales dashboard. I got into programming through game security, and I'm currently studying operating systems and compiler construction, with cybersecurity next.

PROJECTS

Interactive Portfolio — *Personal project* November 2026
Next.js 16, React 19, TypeScript, Tailwind CSS, WebGL shaders, Web Audio API, Vercel
- Built a portfolio with an animated mascot guide that moves between sections and reacts to clicks and idle time
- Loaded WebGL shaders only when visible and idle, and cut the shader bundle from 266 KB to 37 KB

Furniture Store v2 — *Full-stack web app* June 2026 – July 2026
Node.js, Express, PostgreSQL, JWT, Midtrans, Google Gemini API, Vercel
- Built a store with three JWT roles (admin, cashier, customer), product and customer management, orders, and reviews
- Integrated Midtrans payments, and added an admin dashboard with revenue trends and Gemini-generated sales insights

Toko Sumber Makmur POS — *Team lead, BINUS University* February 2026 – July 2026
Vue 3, Laravel 11, SQLite
- Led the team building a point-of-sale system for a neighborhood grocery store in Malang, and wrote about 80% of the code
- Visited the store in person to see how the owner handles sales and stock before the system was built

Furniture Store v1 and Go Rewrite — *Backend* April 2026 – May 2026
Node.js, Express, PostgreSQL, Go, Gin, MySQL
- Wrote a REST API for products, login, search, and checkout; checkout runs in a database transaction so stock updates roll back on failure
- Rewrote the backend in Go with Gin and MySQL, including sales stats, revenue trend, and top-selling endpoints

NeuroMotion — *Stroke rehabilitation web app* January 2026
Java, Spring Boot, Thymeleaf, MySQL
- Built patient registration, login, and profiles, plus exercise tracking with history and feedback after each session
- Added an SOS alert page and an admin panel that resets weekly progress

Fish Watcher — *Desktop tool* June 2026
Python, Playwright, CustomTkinter
- Built a desktop app that watches a Discord channel with Playwright, joins the matching Roblox server, and sends a desktop notification

Expo Mobile App — *Mobile development coursework* May 2026
React Native, Expo Router, TypeScript
- Built a tab-based React Native app, then exported it to the web and deployed it at tugas-expo.vercel.app

EDUCATION

Bachelor of Computer Science Present
BINUS University Malang
- Relevant coursework: Operating Systems, Compilation Techniques, Mobile Application Development

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, Java, SQL
Web & Mobile: React, Next.js, React Native (Expo), Tailwind CSS, HTML/CSS
Backend & Data: Node.js, Express, Gin, Spring Boot, PostgreSQL, MySQL, REST APIs, JWT
Tools: Git, Vercel, Playwright, Midtrans, Gemini API

CERTIFICATIONS

- English Proficiency, C1 (Advanced)

LANGUAGES

English (C1, Advanced) | **Bahasa Indonesia** (Native)
